CAREER OBJECTIVE

Final-year B.Tech CSE student (CGPA 7.97, graduating August 2027) looking for a MERN Stack Developer / Agentic AI role, internship or full-time. Have built three full-stack systems on my own - an event-driven microservices platform, a multi-tenant coaching-institute SaaS with its own agentic AI microservice (RAG, vector search, LangGraph), and an AI-powered ordering system with a function-calling chatbot. Looking for a team where I get to keep building things people actually use, not just tutorial-style projects.

EXPERIENCE

Full Stack Developer Intern - FluentFeed

Sep 2026 - Present

Pre-launch AI-powered English learning platform | Remote

- Currently working on an unlaunched AI English-learning platform, building features that go directly into their real codebase - React, TypeScript, Node.js, Express, MongoDB.
- Built the speaking evaluation feature myself - a recording UI using the browser's built-in speech-to-text, and a backend that calls the Gemini API to score grammar, vocabulary and fluency and suggest fixes.
- Also built the practice-partner matching feature (a weighted scoring algorithm plus the UI), and wrote a short design doc proposing a queue-based architecture for the AI evaluation pipeline, since sending every request straight to Gemini won't hold up once usage grows.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python

Markup/Styling: HTML5, CSS3

Frontend: React.js, React Native (Expo), Next.js, Redux Toolkit, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST APIs, Socket.IO, JWT Authentication, RBAC

Databases: MongoDB (incl. Atlas Vector Search), SQL, PostgreSQL, Redis

AI Integration: LLM APIs (OpenRouter, Gemini), LangChain/LangGraph, RAG, Vector Embeddings, Function/Tool Calling, Prompt Engineering, Agentic Workflows

DevOps & Infra: Docker, Kubernetes (Basics), RabbitMQ, GitHub Actions (CI/CD)

Tools: Git, GitHub, Postman, Cloudinary, Razorpay

PROJECTS

AI-Augmented API Observability & Auto-Remediation Platform

Node.js, Express, RabbitMQ, MongoDB, PostgreSQL, React (Vite), Kubernetes, OpenRouter LLM - GitHub:

github.com/rajan Kumarsingh01/api_monitoring_with_ai_agents

- Built an event-driven microservices system on RabbitMQ, using a Circuit Breaker, retry-with-backoff, and Dead Letter Queues so a failing service doesn't quietly drop data.
- Added a 4-stage AI pipeline that flags anomalies (Z-score based), asks an LLM to work out the likely root cause, then either auto-restarts/scales the affected Kubernetes service or asks a human first if the fix looks risky - with a React dashboard to watch incidents and approve fixes live.

Kaksha (Sankalp) - Multi-Tenant Coaching Institute SaaS + Agentic AI Microservice

Node.js, Express, MongoDB, React, React Native (Expo), FastAPI, LangChain/LangGraph, Razorpay - Live: coaching-management-system-three.vercel.app -

GitHub: github.com/rajan Kumarsingh01/coaching_management_system

- Built the core platform - a multi-tenant SaaS for coaching institutes, 5 roles, data isolated per institute, JWT access/refresh auth across 20+ modules, plus a companion Android app in React Native.
- Split the AI side into its own service instead of bolting it onto the Node backend - a separate FastAPI + LangChain/LangGraph microservice that the main backend calls over internal HTTP.
- Its main feature is a doubt-tutor that answers from the institute's own notes (RAG over MongoDB Atlas Vector Search) instead of guessing from general knowledge - a LangGraph flow that retrieves, answers, then checks itself before returning. Also added a question generator with a second AI validation pass, and a small custom eval script instead of RAGAS, which was too heavy for the free-tier setup.

QR Food Ordering System

Next.js, TypeScript, Node.js, MongoDB, Redis, Socket.IO, Razorpay - Live: qr-food-ordering-system-nine.vercel.app - GitHub:

github.com/rajan Kumarsingh01/qr_food_ordering_system

- Built and deployed a QR-based restaurant ordering system with live order tracking over Socket.IO.
- Added an AI chatbot that can actually look up the live menu and check order status through function-calling, not just chat - it uses Redis to remember context within a session. Payments run through Razorpay, and deploys are automated with GitHub Actions.

EDUCATION

Global Group of Institutes, Amritsar

2023 - Aug 2027

B.Tech, Computer Science & Engineering | CGPA: 7.97 / 10 (through 6th semester)

R.J.S. College, Dighwara, Bihar (12th): 69.8% | Leelawati Devi Int'l School, Hajipur (10th): 73.4%

CERTIFICATIONS & ADDITIONAL INFORMATION

Industrial Training Program - MERN Stack, ThinkNEXT Technologies Pvt. Ltd. Grade: A

- Solved 50+ Data Structures & Algorithms problems on LeetCode.
